

Front Range Water Supply Report

June 14, 2013

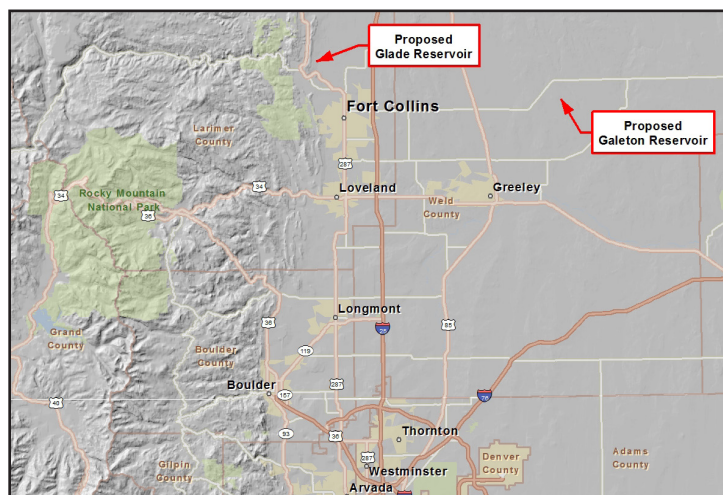

NORTHERN INTEGRATED SUPPLY PROJECT

Proposed Project Purpose: The Northern Colorado Water Conservancy District (Northern) provides water and operates infrastructure that serves numerous communities along the Front Range of Colorado. Northern and 15 entities that use these facilities requested a Section 404 (Clean Water Act) Permit from the Corps' Omaha District Regulatory Branch to undertake the Northern Integrated Supply Project that will provide an additional firm yield of approximately 40,000 acre-feet to address projected growth that is anticipated to occur within each of their service areas. The project proposes the construction of two reservoirs, Glade and Galeton, with capacities of 170,000 and 45,000+ acre-feet, respectively. The Corps is the lead federal agency and has been preparing an EIS since 2003 to analyze environmental affects. A Draft EIS was released April 30, 2008. More than 200 reservoir sites and 16 water sources were evaluated with four project alternatives being carried forward in the EIS.

Next Milestone: Supplemental Draft EIS

May 2014

*The Supplemental Draft EIS date is tentative as there are a number of factors that could potentially impact the date including additional dynamic agency collaboration, updated study information and new federal and state requirements.

*Elevation data provided by U.S. Geological Survey. Base map data provided by ESRI GIS Mapping Software.

EIS TIMELINE

EIS Milestone	Date
Initial Notice	Aug. 20, 2004+
Scoping	March 2004+
Draft EIS	April 30, 2008+
Draft EIS comments due	Sept. 13, 2008+
Supplemental Draft EIS	Spring 2014*
Supplemental comments due	Summer 2014*
Final EIS	Spring 2015*
Permit Decision	Fall 2016*

+ completed
* target timeframe
