

ROCK AND SOIL ASSESSMENTS Underway at the Glade Reservoir Site

Crews are testing construction materials at the future site of Glade Reservoir, just north of Ted's Place along U.S. 287. These are strictly assessments of rock and soil for design purposes.

**Reservoir
construction is NOT
currently in progress.**

These assessments are
expected to take place
from **June to November.**

We want to be a good neighbor during this process, as well as during future construction of Glade Reservoir. We will implement numerous measures and tools, such as noise-monitoring equipment and other devices, to closely evaluate and mitigate impacts.
